fantasy MMOG had a secret weapon to help them take over the world: World of Warcraft.

Camelot Legends recognized the threat and quickly launched a reactionary strike, hiring a high level character designer to help them design a new realm

and a game engine that were exactly enough like WoW to be a threat but not enough to make any of the old players in Camelot return to the fold. Camelot Legends was certainly innovative and game changing. They shifted from the MUD-

like world of original Camelot
to a clearly graphical MMOG.
And they took the time to make
their fantasy world look and
sound like WoW while
retaining the gameplay of the
original Camelot. But after
Camelot Legends ran for a few

months, the first sign of trouble hit. A scandal broke out regarding the business practices of the publisher. Everyone knew the move was coming, but did Camelot Legends expect their next big move to also result in them being dragged through the

mud and losing their own game? Well, that next move was so big that no one was prepared for it. In the spring of 2004, Camelot Legends released a new game called Chivalry. The game took out the original game, Camelot

Legends, and began to slowly make its way into the minds of future Camelot players. Is Camelot Legends doing better or worse than before it lost all of its players to Chivalry? Probably better, but could have been worse. It still had a

devoted following and was among the top games for roughly a year. Are they as popular as they were before they lost all of their players?
