Introducing an all-new web browser from S-soft! A fast and very elegant browser designed to be the best choice for those who require simplicity. S-soft Exbit Browser is a lightweight web browser that provides a clean and intuitive environment for helping you surf on the Internet. Compared to other web browsers that come packed with powerful customization tools, such as spell check, private browsing, a download manager, incremental find, and tab grouping options, S-soft Exbit Browser keeps things as simple as possible and provides only basic functions. The user interface is quite plain and lets users insert URLs in a dedicated pane, refresh the current webpage, stop the loading process, perform a quick search on Google, go to the previous or next webpage, as well as jump to the current homepage. Another notable characteristic worth mentioning is represented by the possibility to create bookmarks. Plus, you can delete the selected one or clear the entire list with just one click, and go to the selected bookmark. When it comes to configuration settings, S-soft Exbit Browser lets you perform several tweaks, as you are allowed to select the search engine, enter the homepage, as well as open a blank page, go to your homepage, or open the default search page when you run the web browser. What's more, the tool displays the current time in the primary panel and lets you view a few details about your RAM and operating system. During our testing we have noticed that S-soft Exbit Browser offers very good browsing speed, and no errors showed up throughout the entire process. Taken into consideration that the app provides only a few dedicated parameters, you would expect it to leave a minimal footprint on system resources, but it actually stresses up the CPU and memory, so the overall performance of the computer may be burdened. All things considered, S-soft Exbit Browser proves to be a simple-to-use web browser that is suitable especially for less experienced users, as it doesn't bundle advanced features. What's new in S-soft Exbit Browser version 8.1.0 Fixes: • Edit interface position is improved. • Delete browser history. • If the anti-virus is configured to run in the background (background mode), it may sometimes stop running. • Sometimes the "Key in Chrome" could be blocked. Other Improvements: • Added several page-bookmark-related issues. • Fixed some IE related issues
