The controversial bug, which Microsoft described in September as "critical" but not yet causing widespread damage, as of Friday was one of hundreds

of uncaught memory overrun errors that were discovered this year in every version of SQL Server, code that runs its databases. SQL Server was one of the first Microsoft products to be attacked by the hacking group known as "Anonymous," which posted a list of more than 300 Internet sites that used the flawed SQL Server in October, and which later took credit for crippling large corporations like Target and Sony. The source code for SQL Server was leaked in April. The bug made it possible for hackers to crash or corrupt databases in a way that made it all but impossible to identify the problem or determine who had attacked a targeted machine. Even with the bug fixed, some databases might remain irretrievably corrupted. After the bug was 570a42141b
