As with any system cleanup, there will always be a risk of losing important data, so it's recommended to back up your files in advance. The following guide will show you how to remove temporary internet files in Windows 10. Remove temporary internet files: There are three key folders where Windows stores temporary files. Any file that is downloaded and has not been saved to your hard drive will be stored in these folders. The Temporary Internet Files folder contains files that have been downloaded to your PC but not saved. This is the default location of downloaded files, and it is used when you are accessing the web, but you haven't saved any files. Downloaded files will be stored in the Download folder for Windows 10, as this is the default location of downloaded files. Cookies are small files used to save and store information. They are stored in the Default cookies folder, or the cookies folder, depending on what you've chosen as your default Internet browser. The following guide will show you how to delete temporary internet files in Windows 10. You will need to run the program as an administrator. Restore a file, folder, or computer: 1. Press the Windows button, then press R to open the Run dialog box. 2. Type "regedit.exe" and click OK. 3. Locate and select the option labeled "Recover files from the Recycle Bin" and click OK. 4. Click on the File

Category: Office Tools > Office Tools > Password RecoveryQ: Is there a way to "hold" a desktop shortcut to appear in the system bar (taskbar)? I know it sounds like the opposite of what this site is for, but I was hoping that someone knew of a way to make my desktop shortcuts in the file manager stay in the system bar (taskbar) and not disappear. I have the latest Ubuntu and I was under the impression that was one of the features that the Ubuntu team was striving to get as part of Unity. A: I believe there is no way to prevent a shortcut from "disappearing". The most you could do is make it so that every time you click on the shortcut it will "autohide" or be more flexible. This will prevent the shortcut from being hidden by the application itself. It sounds like what you are looking for is to have the launcher be more "aware" of where your apps are in relation to the workspace you are using. If this is the case then you may want to look into the Compiz Config Settings Manager for assistance. The File Shortcut module has a section that is labeled "Keybindings". This should allow you to bind a key to a launcher item and when you press the key it will trigger the launcher. Example: Install the compizconfig-settings-manager Run compiz-config-settings-manager (hit the super key and type in compiz-config-settings-manager) Open the Window Management section Click the "Bindings..." button Select the "File" key and then "Shortcut Key". Select the Launcher/Window options Select the "Execute command" option In the command text box, type in the command you want to execute upon pressing the keyboard shortcut. Here is a link to the Ubuntu forum that discusses this a bit further: Ubuntu Forums: Binding keyboard shortcuts to the Unity launcher Thoughts on Anarkali Delhi is full of cultural attractions and places to see and not to miss. One such place is the Anarkali Bazaar. It is an area in Delhi, near the Red Fort, known for the trademark embroidered saris worn by those from the royal household. However, those who are interested in the art of hand embroidery and the traditional way of weaving and dyeing will be disappointed, as no-one actually sells the saris. The Anarkali Bazaar, today, is considered to be one of the finest examples of market-style shopping centres, where you can buy everything under one roof. Due to its strategic location,
