Sophie's Safecracking Simulator is a free virtual reality safecracking tutorial that takes you on a journey through the world of locksmithing by learning how a safe lock works. The application starts by introducing you to the basics of how a safe lock works. Then, it helps you practice cracking safe locks by demonstrating how they work with step-by-step instructions and a variety of tutorials. Your mission is to put all the pieces back together and solve the puzzle of a safe lock. You can use the safe lock key to open the lock, use your drill to take apart the lock, or use your toolbox of lock picking tools to attempt to pick the lock. As you progress through the locks, you will unlock new challenges and new rewards that you can use to extend the tutorial. What's in The Tools Bundle: This is the most extensive tool bundle ever in a safe lock puzzle game. The bundle includes seven tools - four tools for safe locks and three unique tools. Each tool has its own unique tricks and techniques that you'll need to be creative to solve puzzles and rescue Sophie. Unlock these tools by solving each of the safe lock challenges that you encounter in the tutorial. The bundle also includes two high-tech magnifying glasses that will help you see what you're working with better, which is perfect for getting a quick view of the lock. This is a safer and more interesting way to learn safecracking than the dull, textbook approach! Try it today!

This Minecraft video shows you how to set up a simple form of protection on your Minecraft creation. This is so that no-one can access your sanctuary and build on it. The steps are simple and fairly uncomplicated so you can follow them all with a beginner's mind. IMPORTANT NOTE: YOU WILL NO LONGER BE ABLE TO REPLACE YOUR HYDRAULIC SHELL. YOU HAVE TO REPLACE IT YOURSELF. This video includes the following: Replace your hydraulics Install a redstone safe Install a redstone door Install redstone counter 7 Tips to avoid Minecraft Tears Minecraft is a very popular game that involves planning a city, building a home, and then exploring the world. But the game is also very easy to get yourself into trouble. If you want to avoid things that can trip you up (and look awesome in the process), these tips can come in handy. 1. Don't build so close to the borders of your home! If you're constantly being attacked because you built right up next to an enemy spawn, you might want to rethink building so close to that border. Don't forget to build your home with a railing in case someone falls into your home and needs rescuing. 2. Don't spend all your time collecting things that can't be used. Don't think you need to collect tons of obsidian to build a new sword! Also, don't spend all your time farming your first bushes. That's just silly. This is a video game, and you're supposed to use weapons and armor. 3. Don't forget to research your weapons. Do you really need to use a rock pick instead of a pickaxe? The answer might just be "no." Make sure to research both weapons before getting started. Maybe you should use a pickaxe instead because it has more durability. 4. Don't keep hiding in a house all day. You probably have the necessary weapons and armor to defeat whatever's attacking you. If your house doesn't have many doors and windows, you might not even be able to escape from an angry mob. Make sure to explore your location often so you can use your resources as they become available. 5. Don't forget to dig your well! Sure, you have a giant drawbridge, and the mob is attempting to break

What's new:

Back in November I promised an explanation of how I carry safes around, and how it came to be that most of the public safes in this city were locked up in Sophie's Corner Shop. I promised to explain how they protect themselves from prying, hammer-wielding bandits. What I didn't mention was that I would later discuss these topics with robbers in prison. So for those of you who missed it, here's the background... Safes, or strongboxes as they're sometimes called, are like a built-in armour. When they're closed they seem lifeless, and this is how they market them. Their deadliness is based on a fortunate accident of history. When safes were first invented in the late 17th century by Dutchman Robert Duncanson, there were no secure locks. Anyone could open the combination-proof safe with the proper key. Criminals therefore chose to avoid houses, barns and churches. That changed in 1793, when the Swiss diarist J. H. Kaufmann installed a wooden barrel with a sliding door in his dining room. And locked inside were two valuable items—three hundred ducats of gold and two months' salary for the family's maid (later on he added two thousand ducats). Many years later, an Iowa farmer was murdered for his money in the same manner. Kaufmann's invention was later adopted by famed spy George Villiers, the Duke of Buckingham. Villiers was on the lam, and he and his servant James Sterrett had hidden money in a dozen of the hardboard barrels at Buckingham Palace. The Duke didn't get the chance to use the barrels, however, because he was captured and executed ten years later by his nephew, the Earl of Derby. Villiers' genius consisted in having developed a technique for keeping the barrel closed from the moment it was loaded. He used a combination lock, and it's still used this way to this day. When the Duke of Buckingham was arrested for treason, Sterrett was questioned on Villiers' whereabouts and on his method of locking the barrels. He needed no further prompting. He simply demonstrated how the lock worked on a specific chest. To this day, London safecrackers don't think of "safe" the same as they would a strongbox. There's a big difference between a box that's locked and secure and one that's locked and easy. So let's look at
